(54) Title: METHOD OF PREDICTING INPUT

(57) Abstract: A method of predicting input of electronic objects in a communication device is described. The method includes the steps of: (a) establishing a first database of electronic objects susceptible to being inserted into multimedia messages composable on the device; (b) establishing a second database of electronic object attributes; (c) establishing one or more associations between at least one object of the first database and at least one corresponding attribute of the second database; (d) receiving from a user of the device a request for inclusion of one or more of the objects into a multimedia message, said request including at least one input argument; (e) matching said at least one input argument with said at least one attribute in the second database and thereby identifying one or more objects corresponding to the at least one input argument and its associated at least one attribute; and (f) presenting to the user a display representation of said one or more objects corresponding to said at least one argument.
